Academic Project

- 2021 **Contributory Broadcast Encryption with Efficient Encryption and Short Cipher text**
This project call for cryptographic primitives allowing a sender to securely encrypt to any subset of the users of the service without relying on a fully trusted dealer . Broadcast encryption is well study primitive intended for secure group-oriented communications. It allows a sender to securely broadcast to any subset of the group members nevertheless , a system heavily relies on a fully trusted key server who generates secret decryption keys for the members and can read all the communication to any members .
PHP / MYSQL
- 2022 **Student Requisition portal**
The project named “ STUDENT REQUISITION PORTAL” A student can use the Student Requisition Portal to submit any of his or her requests to the institution online, and the required papers will be delivered as soon as they are ready. Our system at present will help to overcome the drawbacks of the previous versions of the system as per mentioned in the literature survey. Smooth access and a more user-friendly UI will help the users to get a home-like environment. .
Python Django framework
- 2023 **Developing Single Page Application Using Serverless Concept**
Pustaka (pustaka.co.in), started as a private limited company in 2014 with the intent of publishing Indian regional language books in digital format. We started with just 200 books and grown to 5200+ eBooks from 390+ authors (as on Oct 2020) in Tamil, Telugu, Kannada, Malayalam and English. Pustaka want to change their admin dashboard from multipage web application into single page application For better performance and satisfies the author requirements so Pustaka decided to upgrade her admin dashboard. .
